Material: VicPET Wool, MDF and Lacquered Steel

Installation: Corners

Fixation: Mechanical Fixation

Certifications:

Description

Mega Bass Trap VMT XXL is a broadband bass trap that will help dealing with frequencies from 50Hz onwards. Its huge performance from 50Hz onwards to control most of the audible frequency range makes Mega Bass Trap VMT XXL likely the best value engineer solution available in the market nowadays.

The significant advantage of a broadband bass trap is that it will help you deal with the low-end frequencies and at the same time with the medium and high frequencies. This means that with a single product one will have most of the audible frequencies taken into account. As everyone knows, if one really wants a good room to work, and to enjoy music or to see a film, one will definitely need to take into consideration all audible frequency spectrum and not only the low end. The Mega Bass Trap VMT XXL will also be able to handle the acoustic defects of most rooms, such as flutter echoes and speaker boundary interference.

Vicoustic was able to develop a product with superb acoustic performance, mostly made of recycled content (plastic water bottles), that is recyclable at the end of life and that also takes into account important things to consider in a room such as air quality and human safety. And like any other VMT product, the front is totally customizable.

With 5 selected VMT colors and 3 different frame finishes, one box of Mega Bass Trap VMT XXL (two units) includes the VMT front and VicPET Wool filling to maximize the absorption.

Performance
